AND D. HB A IS A TETRAMER OF TWO ALPHA-A AND TWO BETA-1, HB A' IS TETRAMER OF TWO ALPHA-A AND TWO BETA-2, HB D IS A TETRAMER OF TWO ALPHA-D AND TWO BETA-2.

MISCELLANEOUS: SPHENODON'S HBS HAVE PROPERTIES NOT FOUND IN OTHER REPTILES: POOR COOPERATIVITY, HIGH AFFINITY FOR OXYGEN, SMALL BOHR AND HALDANE EFFECTS, APPRECIABLE PHOSPHATE EFFECTS (THOSE PROPERTIES ARE ALSO FOUND IN THE HBS OF PRIMITIVE UROBELE AND CARCILLIAN AMPHIBIANS).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           J. Biochem. 89:37-47(1981).

-i. FUNCTION: PA2 CATALYZES THE CALCIUM-DEPENDENT HYDROLYSIS OF THE 2-ACYL GROUPS IN 3-SN-PHOSPHOGLYCERIDES.

-i. CATALYTIC ACTIVITY: PHOSPHATIDYLCHOLINE + H(2)O = 1-ACYLGLYCERYL-PHOSPHOCHOLINE + A FATTY ACID ANION.

-i. SIMILARITY: BELONGS TO THE PHOSPHOLIPASE A2 FAMILY.
                                                                                                                                                                                                      -;- SIMILARITY: HIGH DEGREE OF SIMILARITY WITH ALPHA D SEQUENCE FROM BIRDS AND TURLE.

HEMOGLOBIN ALPHA-D CHAIN.
Sphenodon punctatus (Hatteria) (Tuatara).
Ebidosauria: Metazoa; Chordata; Craniata; Vertebrata; Euteleostoml:
Lepidosauria: Rhynchocephalia; Sphenodontidae; Sphenodon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Leucine-rich repeat; Polymorphism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DB 1; Length 1256;

Result No.

and

```
The sequence is derived from a human foetal brain cDNA library. The protein is highly expressed in brain tissue and has nootropic, neuroperotective, neuroleptic, anticonvulsant, antibarkinsonian, antidepressant activities. The present sequence is used to antidepressant activities. The present sequence is used to differentiation and survival, screen OCTIP modulators and detect mutation in OCTIP gene. OCTIP modulators can be used to treat or prevent chronic neurodegenerative disorders (e.g. Alzheimer's, Parkinson's, Huntington's and ALS), CNS disorders (e.g. schizophrenia, panic, depression), behavioural, sleep and eating disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ANPTDDTFMVEDAVEAIGFGKFQWKLSVLTGLAWMADAMEMMILSILAPQLHCEWRLPSW 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel rat liver-specific org. anion transporter OAT2 can transporter OAT2. The liver-specific org. anion transporter OAT2 can transport various substances including dicarboxylic acids, prostaglandins, non-steroid anti-inflammatory agents and anti-tumor agents. This sequence represents the rat liver anion transporter OAT2 protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           : : : |:| | | | | | : : || | | | : || | : || | | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | : || | 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FWLPESARYDVLSGNQEKAIATLKRIATENGAPMPLGKL------IISRQEDRGKMR 306

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           12;
                                                                                                                                                                                                                                The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L.lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TGLAWMADAMEMMILSILAPQLHCEWRLPSWQVALLTSVVFVGMMSSSTLWGNISDQYGR 149

                                                                                           designated OCT-1 was isolated. Expression of the gene was detect in proximal renal tubule cells, in liver epithelial cell and in intestinal enterocytes. The DNA can be used to generate transgenic cells for use in in vitro test for renal/biliary excretion or intestinal resorption of xenobiotics and pharmaceuticals. The protein or cells expressing it can also be used to isolate modulators that block uptake of pharmaceutical by the renal tubules.
                                                                                                                                                                                                                                                                                                                                                                               SWQVALLTSVVFVGMMSSSTLWGNISDQYGRKTGLKISVLWTLYYGILSAFAPVYSWILV 178

transporter protein able to transport cationic xenobiotics and pharmaceuticals from the blood into liver or kidney epithelial cells or from the intestine. The gene was isolated by injecting a rat kidney gene library into xenopus laevis occyte and isolating clones conferring uptake of 14C-tetraethylammonium. One clone

```

22-MAY-1998.

This is the amino acid sequence of the rat OCT-1 protein, a new

```
The sequences given in AAB47271-76 represent human organic anion transporter (hOAT) polypeptides. hOAT polypeptides are preferentially expressed in the liver and kidneys of humans. OAT's are membrane proteins that facilitate the transport of organic anions across the cell membrane. The mechanism of transport is thought to be a secondary or tertiary active transport involving exchange of another organic anion. hOAT2A and hOAT2B are thought to be splice variants as they are identical except at the C-terminal end. hOAT proteins and the DNA encoding them, may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate hOAT expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 72 DAVEAIG-FGKFQWKLSVLTGLAW--MADAMEMMILSILAPQLHCE------WRLP- 118

AAA16618 to AAA16697 encode the human secreted proteins given in AAY94898 to AAY94980, isolated from human adult brain, adult thyroid, adult tretina, foetal carcinoma, adult blood, adult neural, foetal kidney, adult tetina, adult testiis, whole embryo, adult cartilage, kidney, adult placenta, adult testiis, whole embryo, adult cartilage, kidney, foetal brain, adult thymus, foetal placenta, adult uterus, adult tumour, and adult bladder, conva hibraries. The polymucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and an animals. The polymucleotides can be used as markers for tissues in which the protein is preferentially expressed, as molecular weight markers on Southern gels, and as chromosome markers or tags to identify chromosomes or to map gene positions. The proteins can be used in the treatment of immune deficiency (SCID), as well as viral, bacterial, fungal and other immunedeficiency (SCID), as well as viral, bacterial, fungal and other infections. These infections include human immunodeficiency (IVI), hepatitis, herpesviruses, mycobacteria, Leismania spp., malaria and candidiasis. The proteins can be used to treat autoimmune disorders such as connective tissue disease, multiple sclerosis, systemic lupus critical autoimmune inflammation, diabetes mellitus, myasthenia gravis, graft-versus-host-disease and autoimmune inflammatory eye disease. The proteins can also be used to treat allergic conditions, such asthma. AAA16698 to AAA16774 represent cycle probes for the human secreted proteir; from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       493
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              369

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a human organic anion transporter protein OAT3. The sequence is used to regulate the transport of anions in cerebral tissue, including drug molecules, and regulation of this transport.

Agents that bind the nucleic acid encoding the osteoclast transporter protein can be used to decrease its expression, thereby decreasing osteoclast activity. The agents can be used to treat osteoporosis and osteopetrosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ŏ
                                                                                                                                                                                                                                                                                 19;
                                                                                                                                The present sequence is murine organic anion transporter 6 (mOATP6). mOATP6 protein is useful for screening compounds which inhibit or stimulate the function of mOATP6 and also compounds that neither agonise nor antagonise OATP6. The identified agonists and antagonist are uscful for prevention and treatment of human diseases, including cancer, inflammation, cardiovascular disease, central nervous system disorders, kidney diseases, liver disease and autoimmune diseases.
                                                                Murine organic anion transporter 6 polypeptide, useful for identifying agonists/antagonists that are useful in treatment of cancer, kidney disease, autoimmune disease, inflammation and cardiovascular disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents human osteoclast transporter protein. Agents that bind the nucleic acid encoding the osteoclast transporter protein can be used to decrease its expression, thereby decreasing osteoclast activity. The agents can be used to treat osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               297 lkiniqkeislakanytasdifripmirrmtfclslawfatgfayyslamgveefgvnly 356

Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is a human protein which has at least one hydrophobic domain. This protein may be a secretory or a membrane protein. The present protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopoiesis activity, tissue growth activity, and activity, and activity, the membrane protein cativity, and tunnour inhibition activity and inflammatory activity and tunnour inhibition activity. The present protein could therefore be used for treatment of autoimmune disease, Alzheimer's disease, Parkinson's

                                                                                                                                                                            The present sequence is human organic anion transporter (hOAT) protein. hOAT is expressed in kidney and brain and removes toxic anions from the circulation. It can be produced in host cells by transforming them with recombinant vectors containing nucleic acid encoding hOAT. It can be used in screening for compounds that suppress or enhance anion uptake and transport by hOAT, to identify molecular variants of nephrotoxic compounds, to detect daug-drug interaction within kidney and brain and to test for transport of a covalently modified form of a nucleotide phosphonate analogue by hOAT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tepctdgwiydn-----stfpstivtewdlvcshralrqlaqslymvgvllgamvfgyl 155
